DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C.

121:

I. Claims 1-5 and 13-19, drawn to a low pressure dryer, classified in class 34, subclass 92.

II. Claims 6-12, drawn to a method of continuous supplying and drying of granular material, classified in class 222, subclass 160.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus or by hand, because the independently claimed method with the step of "supplying granular or powdery material..." and the step of "continually supplying dried granular resin material..." are not limitations in the independently claimed apparatus. These features distinguish the independently claimed method from the independently claimed apparatus, resulting in independent and distinct inventions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
